

Innovation Engineering competences are specifically focused on designing, developing and maintaining advanced IT solutions for knowledge extraction, supporting our customers in the research, management and analysis of added-value information for innovation processes, contained both inside (documents, etc.) and outside (Web, structured database) the enterprises.

Innovation Engineering develops and delivers specific products and solutions, based on advanced information retrieval and NLP techniques. These kinds of solutions, together with Web and mobile applications and CRM systems, complete the portfolio of services and products, which Innovation Engineering offers in customised versions for specific needs.

Innovation Engineering customers are large multinational companies, as well as SMEs and public authorities. Innovation Engineering also takes part in several EU and regional government co-funded R&I projects.

**Search, Collaborate, Innovate.**

“

*There's a way to do it better... find it!*

- Thomas Edison -

Wheesbee is an innovative IT platform aimed at making R&I processes easier and faster. Wheesbee represents a convenient **one-stop-shop solution**, enabling you to easily:

- Seek collaboration and find funding opportunities.
- Explore and map technology developments.
- Get suggestions on how to innovate.
- Store, organise and share relevant information and documents.

With Wheesbee you can manage information and your R&D processes in one single desktop view.

## What can you do with Wheesbee?

### Search

Wheesbee contains a powerful and innovative engine, making use of the latest **semantic techniques**, for in-depth searches of the relevant information you need in your enterprise R&I processes.

- **Papers:** browse among more than 18 million scientific papers and articles.
- **Patents:** search among over 10 million (and growing) patents from the European database since 1985.
- **Project ideas:** find potential partners and collaboration opportunities for R&I projects.
- **Public funded opportunities:** a comprehensive database of European grants, financial programmes, and national funds.
- **Public funded research projects:** consider what is going on, for state-of-the-art and benchmarking analysis.
- **Web:** discover relevant URLs and Web sites, crawled and indexed by the system starting from user's input.
- **Who's doing what:** deep-search companies, other organisations, even your competitors, across patents, technical papers, or funded projects.

### Collaborate

Wheesbee is also a powerful and user friendly collaborative environment, which allows you to easily organise and share documents, search results and relevant information with other enterprise users. Thanks to Wheesbee's **web-based Document Management System**, you can create virtual "Rooms" for specific topics of your interest, and also tag and share any type of documents easily, quickly and safely.

### Innovate

Wheesbee uses pattern analysis to suggest and inspire technological innovation. Thanks to its unique **OAT search mode** (Object-Action-Tool), the system can find specific patterns within documents, providing clustered views on "tools" performing specific "actions" on certain "objects".
